                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a human angiotensin converting enzyme-2 (ACE-2). ACE-2 is expressed predominantly in kidneys and testis. The sequence of the full length ACE-2 CDNA was determined from a clone obtained from a CDNA library prepared from mRNA of a human heart of a subject who had congestive heart failure. ACE-2 has significant sequence homologies with ACE enzymes, and has also been shown to hydrolyse angiotensin I into Ang.(1-9). The ACE-2 therapeutics are used to treat blood pressure related diseases and conditions, such as hypertension, congestive heart failure, chronic heart failure, acute heart failure, myocardial infarction, atherosclerosis and renal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present amino acid sequence is human angiotensin converting enzyme-2 (ACE-2), also referred as peptidyl dipeptidase A (EC 3.4.15.1). Nucleic (ACE-2), also referred as peptidyl dipeptidase A (EC 3.4.15.1). Nucleic acid sequence encoding ACE-2 is useful as antisense or antigene agents for sequence specific modulation of gene expression or in the analysis of sequence specific mutations in the gene. Nucleic acid sequence encoding single base-pair mutations in the gene. Nucleic acid sequence encoding ACE-2 is useful in therapeutics, diagnostics and in screening assays. ACE-2 antagonist is used to treat hypertension or congestive heart ACE-2 antagonist is used to reduce the inflammation and pain resulting from an insect sting or bite, which was accompanied by an injection of bradykinin. Anti-ACE-2 antibodies are used to monitor ACE-2 injection for determining the disease or condition associated with a horizont rectain levels for determining the disease or condition associated with

Conditions, including left ventricular systolic dysfunction, progressive to dysfunction, and treatment of atherosclerosis. Zace2 agonists may be used to treat infertility while Zace2 antagonists are used for inducing infertility.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the metalloenzyme Zace2. Zace2, an angiotensin-converting enzyme is a zinc metallopeptidase that plays roles in blood pressure regulation and fertility. Zace2 can be expressed by standard recombinant methodology. Zace2 polypeptides are useful for treating an inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis), and diseases associated with inflammation like arthritis and enterocolitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         181

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              24-SEP-2002 (first entry)
The present invention describes a new method of treating a body weight disorder, increasing muscle mass and decreasing body fat by administration of angiotensin converting enzyme (ACE)-2 modulating compound. The invention can be used for treating body weight disorders, particularly obesity of at least grade 1, diabetes, atherosclerosis and a state associated with lipid metabolism. The method is used for treati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; angiotensin converting enzyme-2; ACE-2; body weight disorder;
                                                                                                                                                                                                                                                                                                         administering angiotensin converting enzyme-2 modulating
                                                                                                                                                                                                                                                                                                                       Treating body weight disorder and increasing muscle mass comprises administering angiotensin converting enzyme-2 modulating compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-NOV-2000: 2000HS-0704216.

The invention decreases the appetite, increases muscle mass and decreases body fat of subject having body mas index of greater than 23 (preferably 24.9)kg/m^2. The present amino acid sequence represents the human ACE-2 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  181

      The invention relates to human angiotensin converting enzyme-2 (ACE-2) polypeptides and polypuclotides. ACE-2 is also known as peptidyl dipeptidase A (EC 3.4.15.1). Polypeptides of the invention are useful for treating or preventing the development of abnormal blood pressure and diseases or disorders associated with the protein in a subject. The diseases include hypertension, hypotension, congestive heart failure, chronic heart failure, acute heart failure, myocardial infarction, atherosclerosis, arrhythmia and renal failure. They are also useful for treating inflammatory conditions and diseases relating to fertility. The present sequence is human full-length ACE-2 protein.
                                                                                                                                                                                                                                                                                                                                                  Claim 2; Fig 1; 218pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                      Isolated human polypeptide, known as angiotensin converting enzyme-2, useful for treating or preventing the development of an abnormal bloopressure or related diseases, e.g. hypertension, heart failure or myocardial infarction -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB; AAD32586.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel human proteins (NHP) and the nucleic acids that encode them and antibodies raised against them. The proteins, antibodies and nucleic acids are useful in the diagnosis, proyensis, prevention and/or treatment or diseases and/or disorders involving vasoconstriction, gastrointestinal disorders, cardiovascular disorders (e.g. hypertension, erectile dysfunction, high blood pressure, coronary heart disease and arteriosclerosis), anorexia, obesity, bulimia, cachexia, disorders of small intestine, disorders of reproductive systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (e.g. male infertility and/or impotence), testicular cancer, lung tumours and other hyperproliferative disorders, disorders of pulmonary system, central nervous system disorders, bone disorders, neurodegenerative diseases and behavioural disorders (e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, schizophrenia, mania, dementia, paranoia, panic disorder, learning disabilities, amyotropic lateral sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sepsis, acne, psoriasis and lupus erythematosus), neural system disorders, respiratory disorders, olfactory disorders and wound healing. The invention relates to the metalloenzyme Zace2. Zace2, an angiotensin-converting enzyme is a zinc metallopeptidase that plays roles in blood pressure regulation and fertility. Zace2 can be expressed by standard recombinant methodology. Zace2 polypeptides are useful for treating an inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis), as targets for identifying modulators of zinc protease activity, for screening or identifying new angiotensin-converting enzyme (ACE) inhibitors, and as a basis for rational drug design for inhibitory modecules. The nucleic acids can be used to detect the expression of a
                                                                                                                                                                                Angiotensin-converting enzyme, zace2, useful for treating inflammatory bowel disease, e.g. Crohn's disease and ulcerative colitis, or diseases associated with inflammation such as arthritis and enterocolitis -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Zace2 gene in a biological sample, as probes for in vivo diagnosis and for detecting and localizing Zace2 gene expression in tissue samples, to determine whether a subject's chromosomes contain a mutation in the Zace2 gene, and to detect aberrations associated with the Zace2 locus. Inhibitors of ACE are used for treating hypertension of various conditions, including left ventricular systolic dysfunction, progressive renal impairment, scleroderma renal crisis, congestive heart failure due to dysfunction, and treatment of atherosclerosis. Zace2 agonists may be used to treat infertility while Zace2 antagonists are used for inducing infertility. The present sequence represents the mouse Zace2-5 protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23-NOV-2000.
                                                                                                                                                                                      The invention relates to the metalloenzyme Zace2. Zace2, an angiotensin converting enzyme is a zinc metallopeptidase that plays roles in blood pressure regulation and fertility. Zace2 can be expressed by standard recombinant methodology. Zace2 polypeptides are useful for treating an inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis).

```
AAU12172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bloactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of proliferation or differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from
                                                                                                                                                              Claim 12; Fig 72; 813pp; English.
                                                                                                                                                                                            Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumours e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cartilage, the proliferation of inner ear utricular supporting cells or of T-lymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA, The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                    541 KCDISNSTEAGOKL 554
                                                                                                                                                                                                                                                                                                                                     541 KCDISNSTEAGQKL 554

prognosing disorders related to the proteins, including car disorders, autoimmune disorders and reproductive disorders New human proteins, useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cardiovascular

Claim 11; Page 311-312; 318pp; English.

The invention relates to novel human proteins (NHP) and the conveled acids that encode them and antibodies raised against them. CC nucleic acids that encode them and antibodies raised against them. CC prognosis, prevention and/or treatment or diseases and/or disorders cc prognosis, prevention and/or treatment or diseases and/or disorders cc prognosis, prevention and/or treatment or diseases and/or disorders cc disorders (e.g. hypertension, erectile dysfunction, high blood pressure, cc disorders (e.g. hypertension, erectile dysfunction, high blood pressure, cc coronary heart disease and arteriosclerosis), anorexia, obesity, bulimia, cc coronary heart disorders of small intestine, disorders of reproductive system cc cathexia, disorders of small intestine, disorders of pulmonary system, cc disease, and behavioural disorders, disorders, neurodegenerative cc disease, huntington's disease, schizophrenia, mania, dementia, paramoia, cc disease, huntington's disease, schizophrenia, mania, dementia, paramoia, cc disease, huntington's disease, schizophrenia, mania, dementia, paramoia, cc psychoses, autism, sleep disorders), immune system disorders (e.g. psychoses, autism, sleep disorders), immune system disorders (e.g. psychoses, autism, sleep disorders), immune system disorders, cc panic disorder, learning disorders, learning disorders, celectous disorders, ischaemic cc entral nervous system disorders (e.g. multiple sclerosis, ischaemic cc immunological disorders (e.g. asthma, acquired immunodeficient syndrome immunological disorders (e.g. asthma, acquired immunodeficient syndrome communological disorders (e.g. asthma, acquired immunodeficient syndrome sepsia, acne, psoriasis and lupus erythematosus), neural system cc disorders, respiratory disorders, olfactory disorders and wound

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Qy
A bank of human testicular cDNA in Lambda gtll was screened with a probe containing the final 3248 nucleotides of endothelial ACE. The complete sequence of tACE was reconstructed from 4 separate clones.
                                                                                                                         Claim 1; Fig 1; 48pp; French.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The isolated nucleic acid sequence was inserted into a plasmid for expression of the protein. The invention covers polypeptides containing all or part of tACE sequence. These are useful in part of inflammation or infectious diseases, especially acute pancreatitis, or diseases in which kinins are involved. Antibodies

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Misc-difference 38
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      04-APR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-OCT-2001; 2001WO-EP11345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WO200226820-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-SEP-2000;
14-JUN-2001;
                                                                                                                                                                                                                                                                                                                                        specific expression control sequence. Expression of the sequence gives the fly an altered phenetype. The purpose of the invention is for identifying agents that inhibit or promote the expression and/or function of genes or encoded polypeptides which modify the APP pathway. The agent is a compound, triple helix DNA, antisense oligonucleotide, double stranded RNA molecule, ribozyme, or particularly an antibody. It is used stranded RNA molecule, ribozyme, or particularly an antibody. It is used as to treat conditions such as Alzheimer's disease. The agent can be used as to pathway modulator or in gene therapy. This sequence represents the protein of the APP related human homologue hCP51674.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a transgenic fly whose genome comprises DNA encoding a polypeptide having the Abeta portion of human amyloid encoding a polypeptide having the Abeta portion of human amyloid encoding a polypeptide having the Abeta portion of human amyloid encoding polypeptide having the a signal sequence. The DNA sequence is a signal sequence, given it the specification. The DNA sequence is operably linked to a tissue-the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New transgenic fly, containing DNA encoding an Abeta portion of human APP, useful for identifying agents which modulate the APP pathway and which can be used to treat Alzheimer's disease \dot{}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cohen D,

C resulting in 3 genotypes, II, ID and DD. It is an object of the CC invention to identify individuals possessing a certain genotype and CC individual can be improved by altering behavior. A claimed method comprises identifying individuals having a certain phenotype, and the theorem of the presence or absence of genetic markers associated CC with the phenotype, and instituting a lifestyle change to exploit CC with the phenotype, and instituting a lifestyle change to exploit CC phenotype is hypertension, the gene marker if the CC insertion (I) ACE allele and exercise training is instituted to CC can be identified by PCR amplification (see AAVA1321-22) of the CC identify subjects who will benefit most from physical exercise CC and also to identify those who are likely to be successful in CC sports.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   XXX

```
The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal
                                                                                                                                                                                                                                                                                                                                                                                                                               Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-DEC-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              17-NOV-2000; 2000WO-IL00766
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25-MAY-2001
                                 disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis, cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases suc as asbestosis and vascular pathologies involving an endothelial abnormality such as deep vein thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           17-NOV-1999;
                                                                                                                                                                       polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various
                                                                                                                                                                                                                                                                                                                                                                            Claim 4; Fig 57; 519pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      멍
                                                                                        The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor IC, cellular tumour antigen p53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various
                  disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis,
                                                                                                                                                                                                                                                                                                     Claim 4; Fig 85; 519pp; English.
                                                                                                                                                                                                                                                                                                                                                      Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antiboo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Angiotensin converting enzyme splice variant; ACEV; interleukin 6; granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen P53; cyclin-dependent kinase inhibitor 1C; wasoactive intestinal polypeptide receptor 2; arteriasclerosis; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; multiple sclerosis; immune disorder; sarcoidosis; multiple sclerosis; immune complex nephritis; deep vein thrombosis;

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 18810; 21pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    N-PSDB; ABL08109

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                597 NIKNNVHIGWTT 608
     Clone A5 was prepd. from adult tick cDNA library. Clone 4UI was prepd. from the larval stage of B. microplus (Calliope strain).

AAQ82948 is a hybrid of sequences from clone 4UI (nt 1-966 & 1747-2047) and A5 (nts 967-1746). The translation of the tick carboxypeptidase cDNA sequence is shown in AAR70013. All the native tick carboxypeptidase sequences listed in Table 11 (see AAR70014-R70023) are found in the translation (see FT). The predicted AA sequence agrees with the peptide sequence for all peptides with 2 exceptions. These differences are Asp for Gln14 in peptide T9126, and Asn for Saspl2 in peptide T9118. Tick carboxypeptidase has a mol. wt. 75172.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                March 13, 2003, 16:56:13; search time 20 Seconds (without alignments) 3869.410 Million cell updates/sec

C; Comment: This enzyme is a zinc dependant dipeptidyl carboxypeptidase the c; Superfamily: mammalian peptidyl-dipeptidase A
C; Superfamily: mammalian peptidyl-dipeptide hydrolase; zinc
C; Keywords: metal binding; peptidyl-dipeptide hydrolase; zinc
C; Keywords: metal binding site: zinc, catalytic (Glu, His, Glu, His) #sta

A;Note: several of the amino acids in reported are tentative
C;Comment: The pulmonary and testicular isoforms of this enzyme differ substantially
ggests that the two isoforms arise by alternative splicing of one gene.
C;Superfamily: mammalian peptidyl-dipeptidase A
C;Keywords: alternative splicing; peptidyldipeptide hydrolase; testis; transmembrane
